PROJECT OVERVIEW • TECHNOLOGY STACK

Technology Stack

The platform is built as a modern single-page web application. Here is a quick summary of the core technologies used to develop and maintain it.

- **Frontend Framework:** React with TypeScript, for a fast, type-safe, component-based user interface.
- **Backend Framework:** .NET Core Web APIs, structured using Onion Architecture for a clean separation between the domain, application and infrastructure layers.
- **Build Tool:** Vite, giving an instant development server with Hot Module Replacement (HMR) for a smooth developer experience.
- **Linting:** Oxlint, configured with React, TypeScript and Oxc plugin rules to catch issues early and keep the codebase clean.
- **Compiler / Fast Refresh:** Powered by either @vitejs/plugin-react (using the Oxc compiler) or @vitejs/plugin-react-swc (using SWC).
- **Optional Optimisation:** The project can be extended with the React Compiler for further render-performance gains as the app grows.

Problem Statement

Introduction

James Thew is one of the famous cook working in one of the five star hotels in the city. He is so famous that the publishers approach him to write recipes book, and provide some of the tips pertaining to the recipes, etc. Also some of the producers want him to work for their recipe shows where he needs to cook two or three recipes of different categories like juices, non-vegetarian and vegetarian recipes, Italian recipes, etc.

He actually loves cooking, and during his free time he spends his time by cooking and trying out new recipes that he had come across. He also wanted to conduct the cookery classes and share his recipes where he can interact with different people and can get their feedback. So he has started the classes near by his home, as a part-time job during the weekends, where people used to attend for learning the different varieties of recipes from him. He generally charges with very less fares for these weekend classes, so as to attract the maximum number of people to the classes.

Customer Requirement Specification

Now Mr. James is thinking to have a website of his own where he can input the recipes on it, so as to reach out to a maximum number of people across the world. So he has approached us with his ideas, and he wants us to help him by creating the website as per his requirements.

Mr. James wants the following functionalities to be implemented for his web site.

1. **The main menu of the website should include the following.**
    - Home Page describing about the owner (Mr. James Thew)
    - Login Page or Register Page. Over here the customer can register with the site provided he makes the payment. The payment for the member ship can be one of the following ways.
        (A) Monthly Subscription – 10$
        (B) Yearly Subscription – 100$
    - Free Recipes (One should be able to view the recipes that are listed as free and give their feedbacks, and for viewing this one need not get registered with the site)
    - View and participate in the contests
    - Announcements (Here one can view the winners of the latest contest that is held and announced by the site owner (James)).
    - Feedback (the feedback about the views related to the site)
    - FAQ's
2. **On the home page the details of the client should be provided.**
3. **The site owner (James) can place a contest as per his requirements, where he can ask the users to post a recipe or post the tips. The one with the best will be receiving the price. Once the recipes and tips are posted, Mr. James will announce the winner after reviewing each of them.**
4. **Once the admin or owner or Mr. James logs into the site, the following menu should appear**
    - Home Page

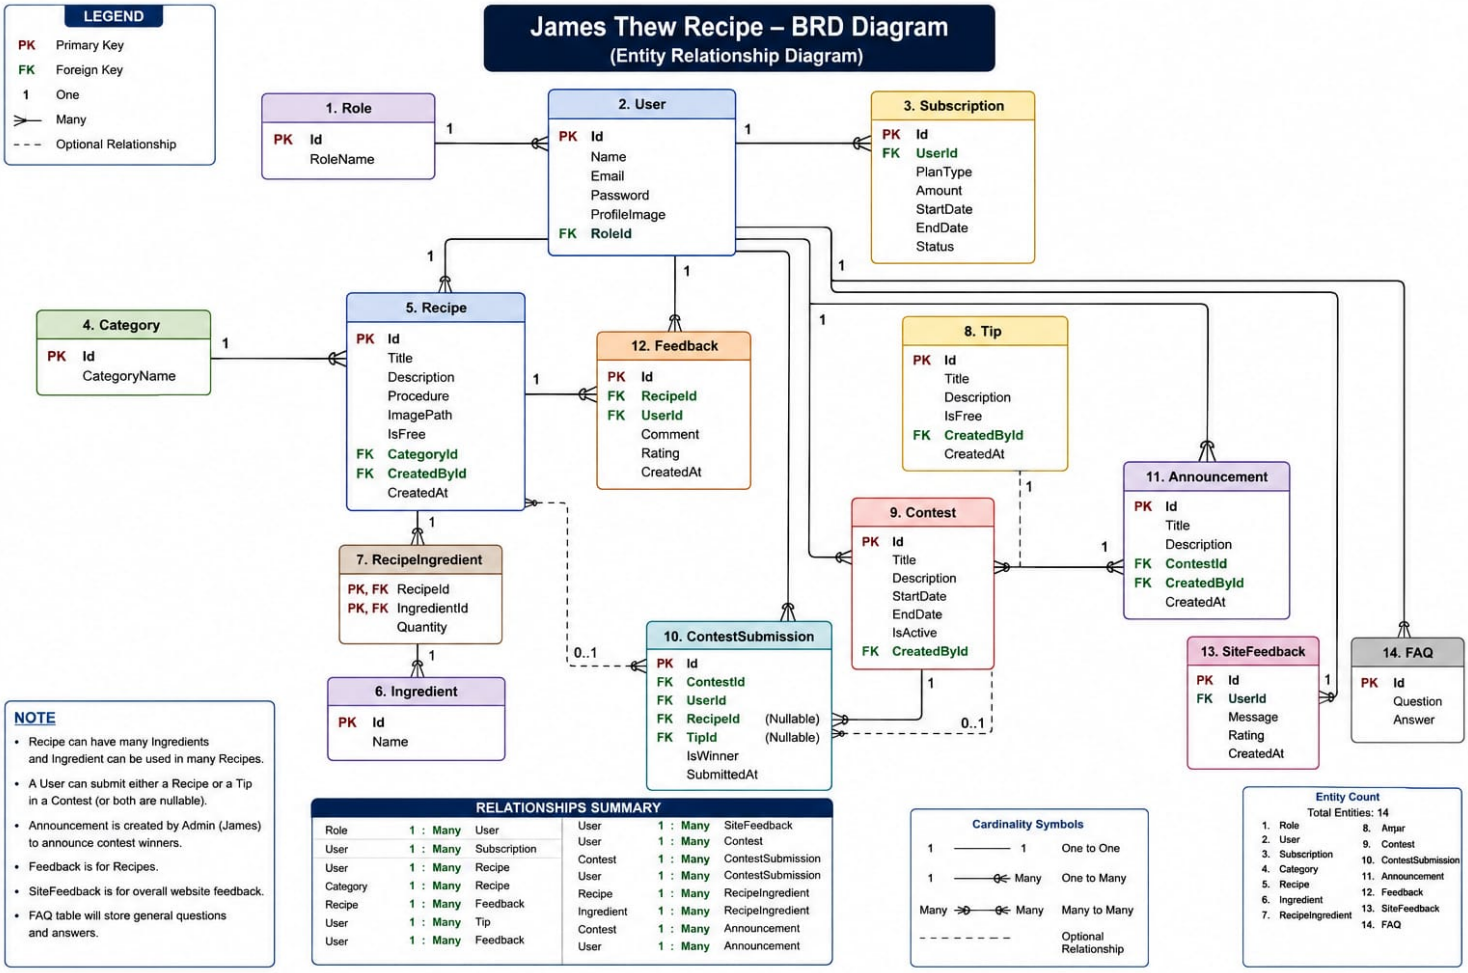

- User Profile (Here the profile of the user is to be displayed. In this page itself the user should be able to edit the profile).
- Should have access to all the cookery recipes on the site.
- View and search the recipes and tips online.
- Can view all the feedbacks received for recipes.
- Post new contests or remove the contests.
- View the posts (Here Mr. James should be able to view the posts (recipes or tips as applicable to the contest) received with respect to the contest).
- Announcements (On this page Mr. James can announce the winners of the contest)
- Upload tips.
- Upload recipes along with the list of the ingredients and the cooking procedures.
- Mr. James can mark the tips and the recipes posted by him, as either free or available to the members of the site only
- Should be able to view or update or delete the tips and recipes that he has uploaded on the site.
- FAQ's (for this section kindly go through the 7th Point in this page)

5. **Once the user logs into the site, the following menu should appear**
    - Home Page
    - User Profile (Here the profile of the user is to be displayed. In this page itself the user should be able to edit the profile).
    - Should have access to all the cookery recipes on the site.
    - View and search the recipes and tips online.
    - Can view the announcements made by the owner.
    - Can send a feedback for a recipe.
    - View and Participate in the contests
    - Send the tips
    - Send the recipes along with the list of the ingredients and the cooking procedure
    - View the recipes and tips that are sent by all the customers of the site.
    - Should be able to view or update or delete the tips and recipes that he/she has sent.
    - FAQ's (for this section kindly go through the 7th Point in this page)
6. **For the general user, who is not the member of the site, the following functionalities are to be provided.**
    - Home Page
    - Can register with the site on the Login/Register Page
    - Should be able to view and search the recipes and tips online on the free recipes alone, but can have access to only the cookery recipes and the tips that are available as free on the site.
    - Should be able to view and Participate in the contests by sending the tips and the recipes along with the list of the ingredients and the cooking procedure

- Can view the announcements made by the site owner.
- Can send a feedback for a recipe.
- FAQ's (for this section kindly go through the 7th Point in this page)

7. **The FAQ's Page will have the following questions, along with their answers.**
    - How to become the member of this site?
    - Will there be any subscription charges?
    - How to view the recipes and tips? Will there be any charges for that?
    - I am not the registered member of the site. Can I participate in the contest held?
    - How to upload or post the recipes and tips?
    - How to post a feedback?
    - I have posted a recipe or a tip with respect to the contest. How can I know who is the winner?

Entity Relationship Diagram

FEATURE 01 / 25 • CULINARY SALON INTRODUCTION

Landing Page

The home page opens with a hero banner introducing the private culinary salon and Chef James Thew's guarded recipe formulations. It highlights live member and recipe stats, alongside buttons to explore recipes or start a VIP membership. The layout is designed to move a first-time visitor from social proof straight into a clear call to action within a single scroll, so the salon's scale and prestige are obvious before they click anything else.

About the Chef

This section profiles Chef James Thew's background and expertise, and lists four featured masterclass disciplines: Juices & Wellness Elixirs, Farm-to-Table Vegetarian, Gourmet Non-Vegetarian, and Classical Italian Gastronomy. Visitors can join a weekend masterclass or create a free account. The short biography is placed deliberately before any pricing, so trust is established first and the decision to join a class or take out a membership feels informed rather than rushed.

FEATURE 03 / 25 • LOGGED-IN CHEF / ADMIN ACCESS

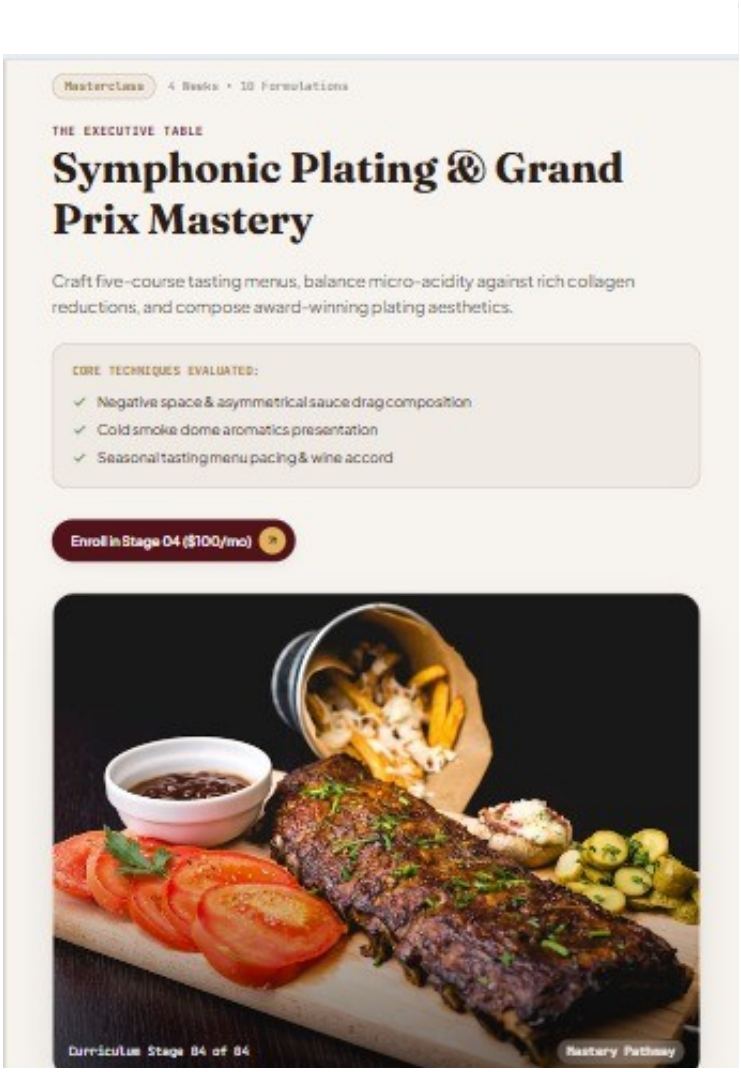

Account Menu

Once signed in, the account dropdown shows the user's name and role (Executive Chef / Admin) with quick links to the Executive Console, Profile & Preferences, and the user's own recipes and tips, plus a Sign Out option. The compact layout keeps every day-to-day action within a single click from anywhere on the site, so a returning chef never has to hunt through separate pages just to manage their own content.

FEATURE 04 / 25 • SYMPHONIC PLATING & GRAND PRIX MASTERY

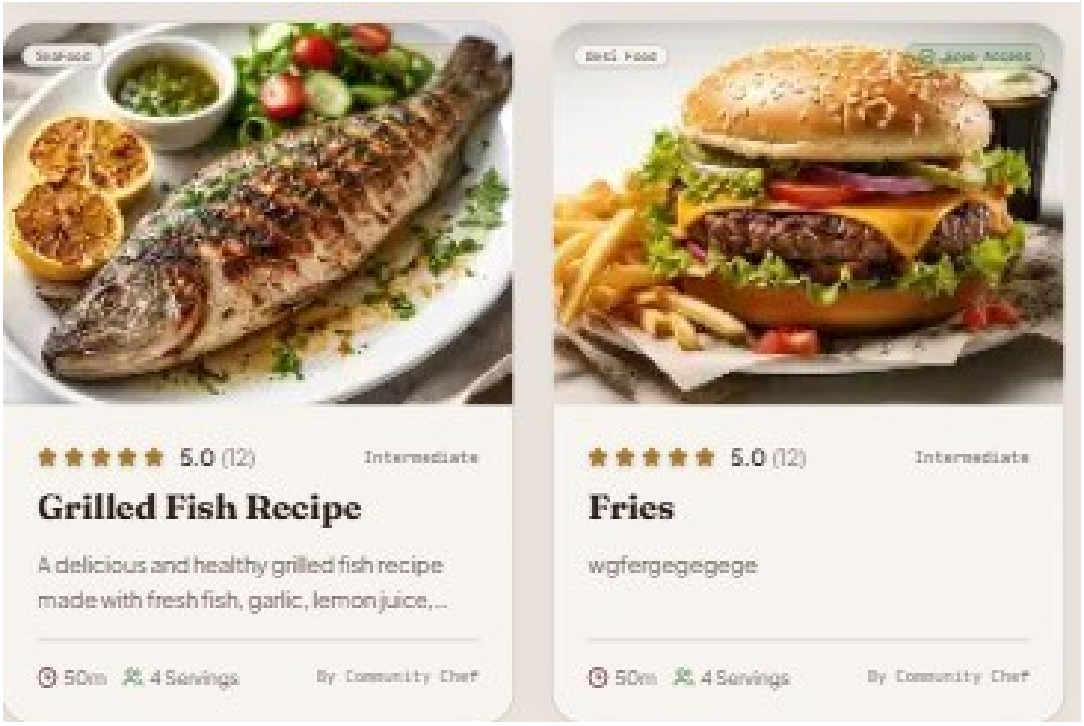

Masterclass Detail

A single masterclass page shows its curriculum stage and the core techniques being evaluated, including plating composition, cold-smoke aromatics, and tasting-menu pacing. A paid enrolment button unlocks the full stage for members. A short overview lets casual visitors see exactly what each stage will teach before they commit, which removes most of the guesswork that usually comes with buying an online cooking class sight unseen.

FEATURE 05 / 25 • BROWSABLE RECIPE CARDS

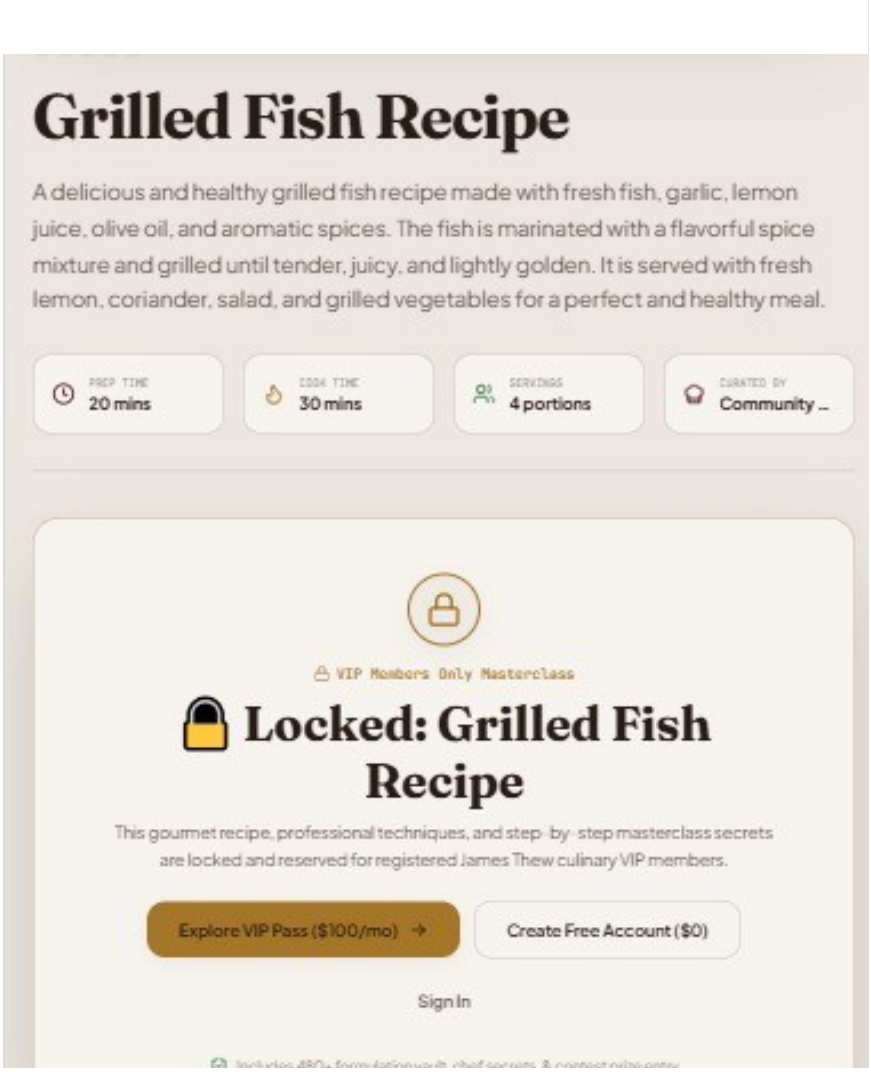

Recipe Catalogue

Recipes are displayed as clean, ratable cards, for example Grilled Fish Recipe and Fries, each showing a star rating, difficulty level, serving size, and the community chef who contributed it. The grid layout makes it easy to scan a large catalogue and settle on a dish in seconds, and it will keep working just as well once the number of published recipes runs into the hundreds.

FEATURE 06 / 25 • GRILLED FISH RECIPE

Recipe Detail (VIP Lock)

The full recipe page shows prep time, cook time, servings and the curator's name at a glance, while the detailed method and professional technique notes stay locked until the visitor creates a free account or upgrades to a VIP pass. This gives every recipe a preview that is genuinely useful on its own, while still reserving enough value behind the lock to give a free visitor a real reason to register or upgrade.

FEATURE 07 / 25 • COMMUNITY FEEDBACK ON RECIPES

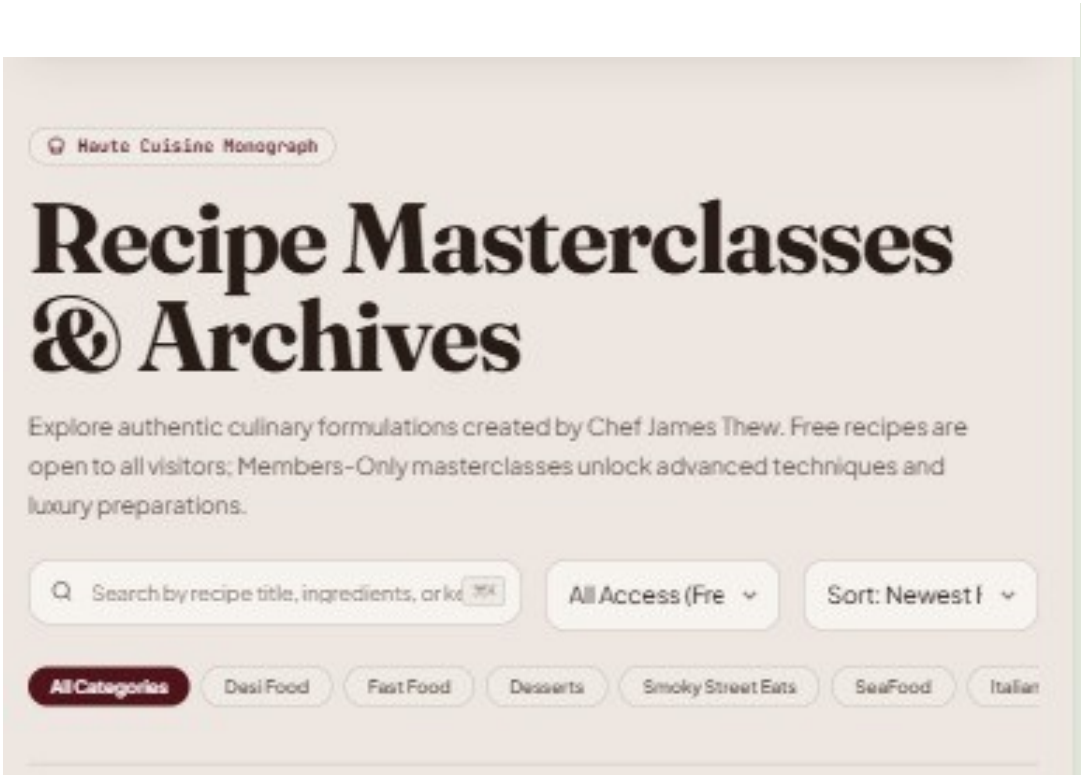

Reviews & Ratings

Guests can leave a star rating, their name and tasting notes describing flavour, heat level or sauce consistency. Submitted reviews from other cooks appear below for everyone to read. This turns every recipe into a small, self-moderating feedback loop, helping new visitors judge a dish's real-world quality before they commit their own time and ingredients to it.

FEATURE 08 / 25 • MASTERCLASSES & SEARCH FILTERS

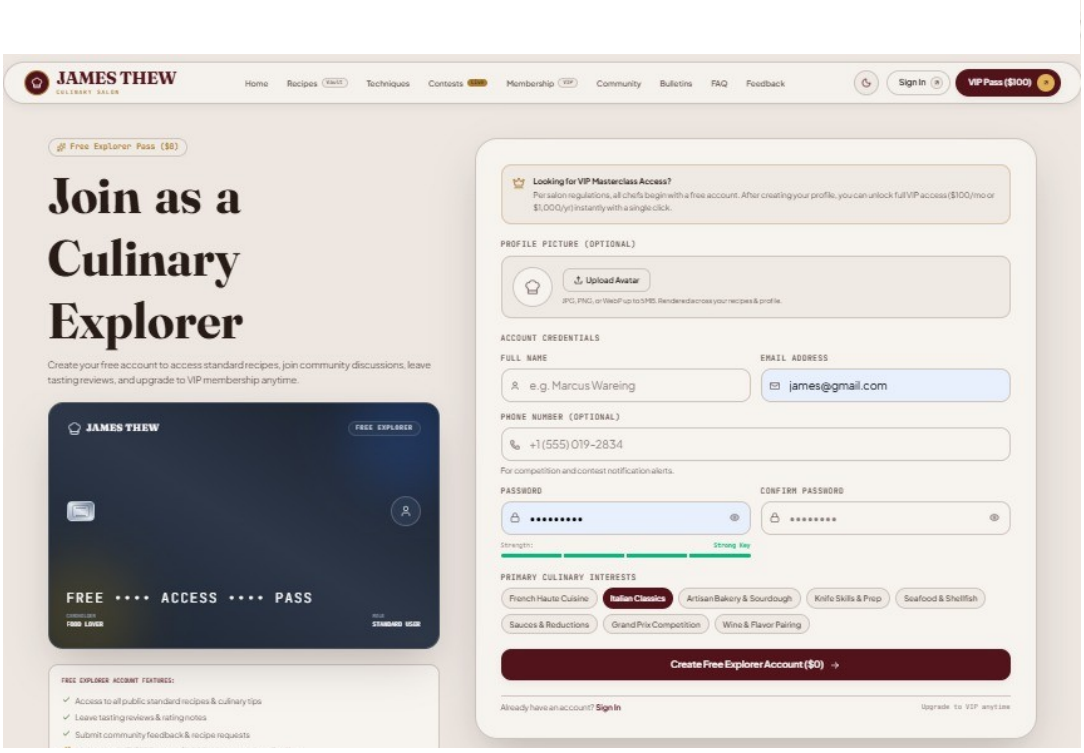

Recipe Archive

A dedicated archive lets visitors search recipes by title or ingredient and filter by access level and category, including Desi Food, Fast Food, Desserts, Seafood, Italian and more, then sort results from newest to oldest. It is built for members who already know roughly what they are looking for and want a fast, direct route to it, rather than browsing the full catalogue from the very top each time.

FEATURE 09 / 25 • JOIN AS A CULINARY EXPLORER

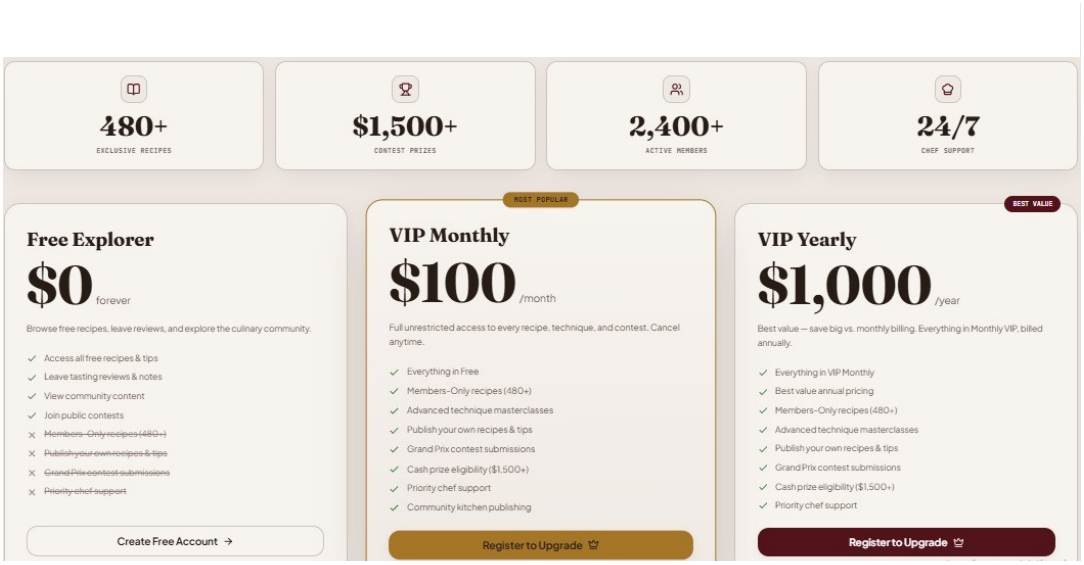

Create Account

New visitors register a free account by entering their name, email, an optional phone number and a password, then choosing their primary culinary interests. The same screen reminds them that VIP access can be unlocked any time after signup. Keeping the initial commitment light while still hinting at the extra value on offer, the form is deliberately built to maximise completed sign-ups rather than overwhelm a first-time visitor with choices.

FEATURE 10 / 25 • FREE, MONTHLY VIP & YEARLY VIP

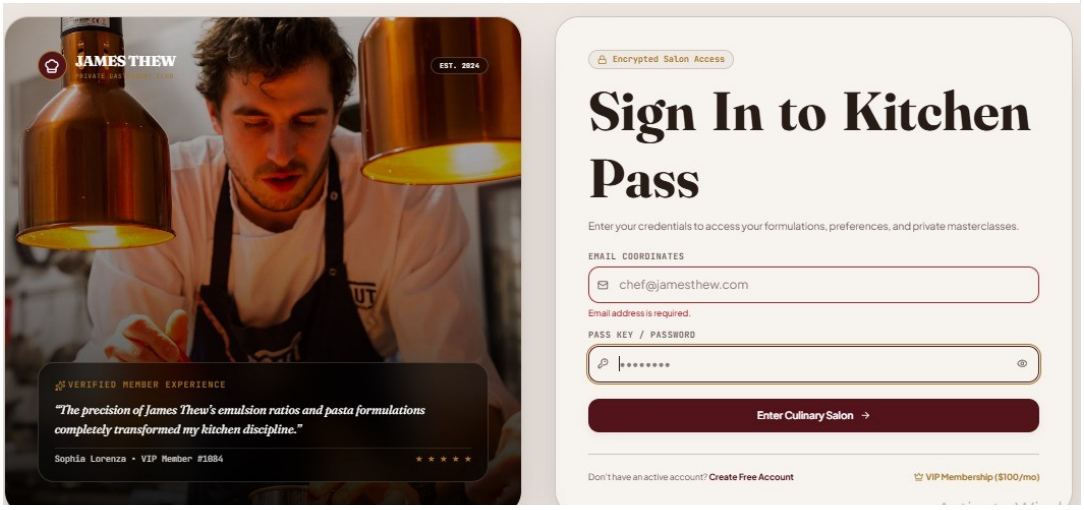

Membership Plans

Three tiers are compared side by side, Free Explorer, VIP Monthly at $100 and VIP Yearly at $1,000, with a clear checklist of what each tier unlocks, from basic recipe browsing up to full masterclass access and contest cash prizes. The side-by-side layout makes the value of upgrading obvious at a glance, nudging Free Explorers toward one of the paid tiers without ever needing a separate, dedicated sales page.

FEATURE 11 / 25 • KITCHEN PASS AUTHENTICATION

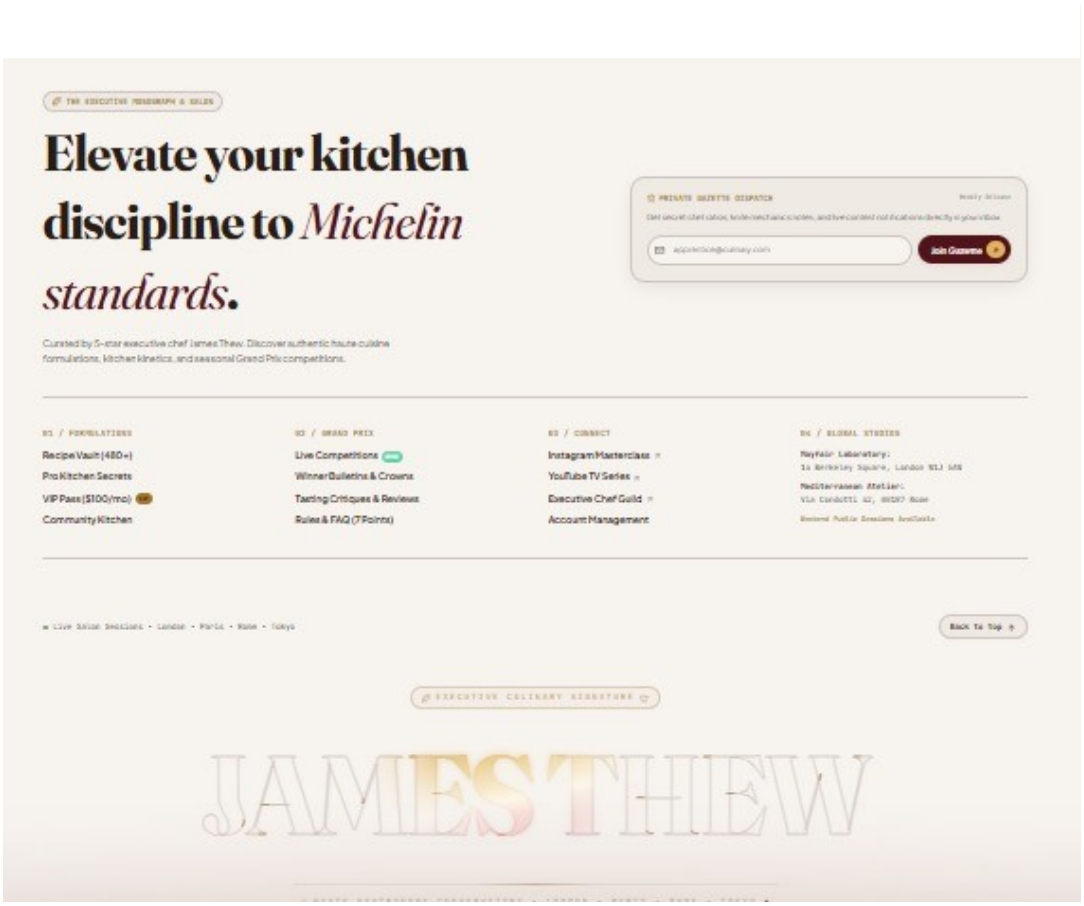

Sign In

Returning members sign back into their Kitchen Pass using their email and password, giving them access to their saved formulations, personal preferences and any private masterclasses tied to their membership. A clean, single-purpose form keeps the process quick on both desktop and mobile, so a returning chef can get back to their saved recipes and classes within a few seconds of arriving.

FEATURE 12 / 25 • NAVIGATION & NEWSLETTER SIGN-UP

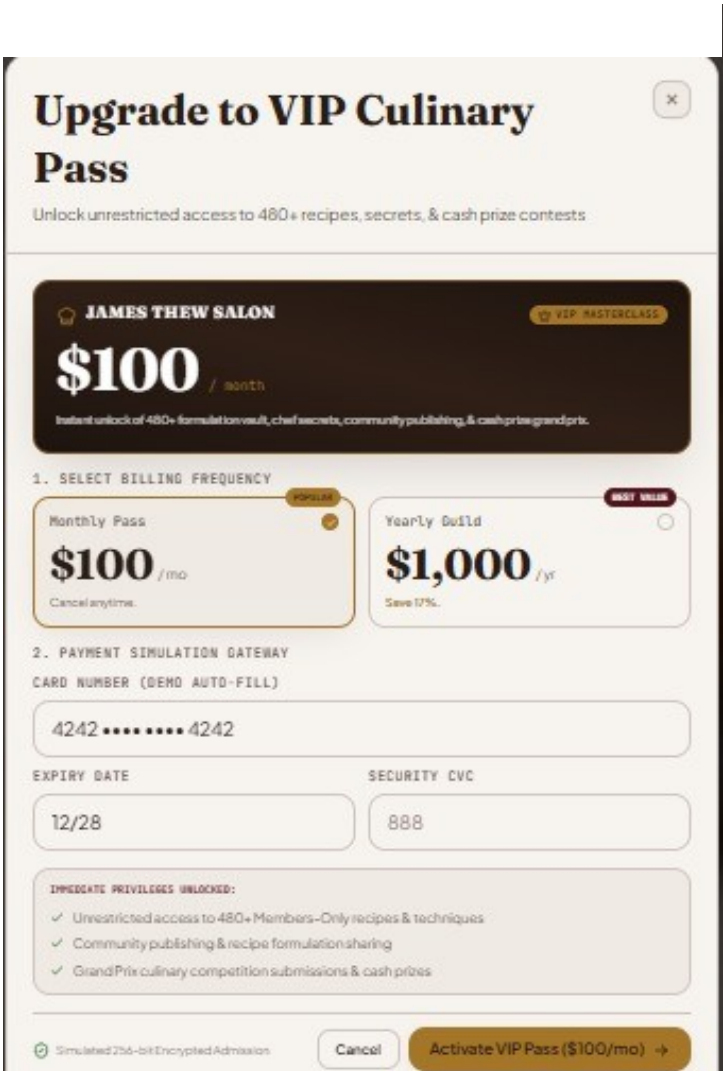

Site Footer

The footer repeats sitewide navigation grouped by category, Formulations, Grand Prix, Connect and Global Studios, and offers a private newsletter sign-up for members who want updates delivered to their inbox. It effectively acts as a second, always-visible map of the whole site for visitors who scroll all the way down, and doubles as a low-friction retention tool through its newsletter sign-up.

FEATURE 13 / 25 • PAYMENT SIMULATION MODAL

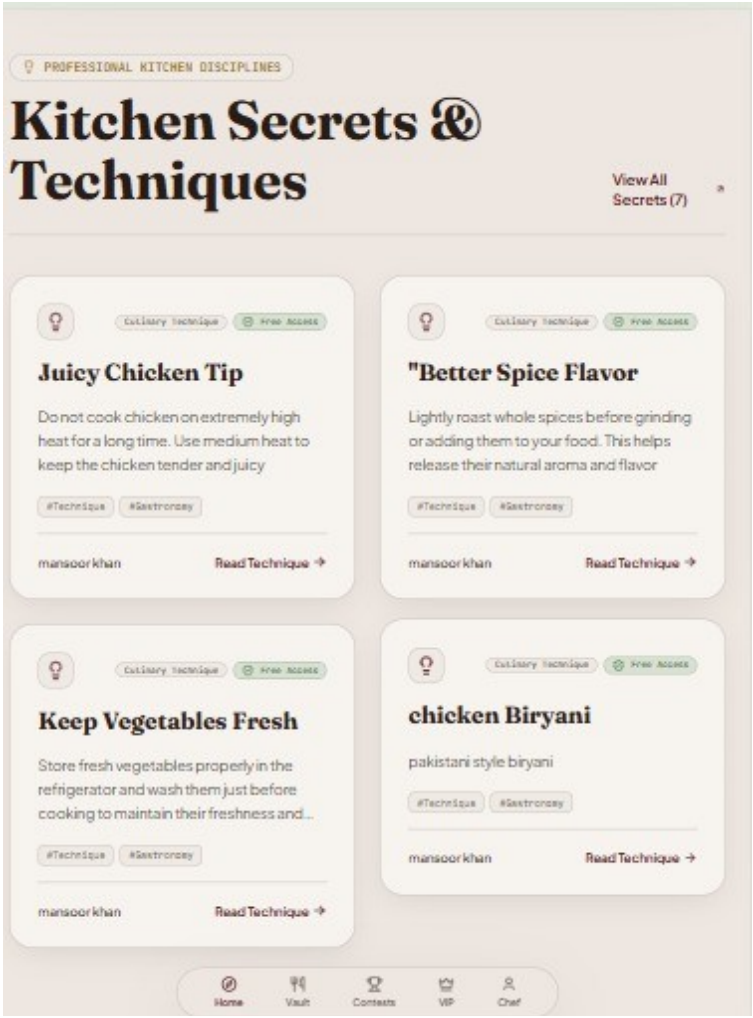

Upgrade to VIP

The upgrade flow lets a user pick monthly or yearly billing and enter payment details in a simulated, secure-styled form. Confirming the payment instantly unlocks the full recipe vault, community publishing and contest submissions. Because the benefit of upgrading is felt immediately rather than after a delay, the perceived value of the VIP pass stays high at the exact moment the payment is confirmed, which is when it matters most.

FEATURE 14 / 25 • COMMUNITY COOKING TECHNIQUES

Kitchen Secrets

A free, open-access library of short professional tips, such as the Juicy Chicken Tip, spice-roasting advice and keeping vegetables fresh, contributed by community members and browsable by any visitor, no account required. It is designed to give even non-members a genuine reason to keep coming back to the site, quietly building goodwill long before anyone is ever asked to pay for anything.

FEATURE 15 / 25 • JUICY CHICKEN TIP

Technique Detail

Opening a tip shows its full text along with the contributor's name, the publish date, and topic tags such as Technique and Gastronomy, giving every quick tip its own shareable, citable page. The focused layout keeps attention on the advice itself rather than on surrounding site navigation, so each tip reads like a small, complete lesson rather than a fragment of a bigger page.

FEATURE 16 / 25 • GRAND BIRYANI COOKING CHAMPIONSHIP 2026

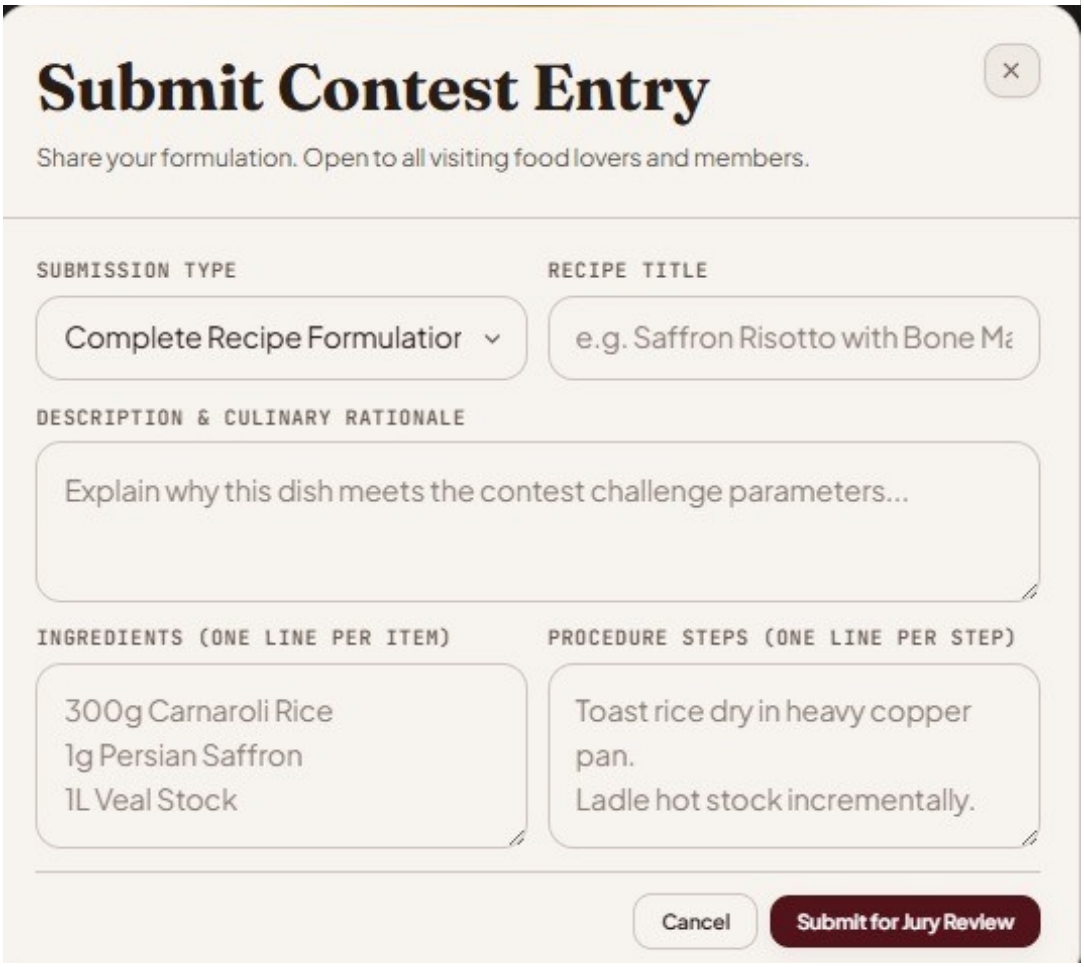

Cooking Contest

A featured competition banner showcases the contest theme, the cash prize on offer, the number of entries received so far, and a live countdown to the submission deadline, with a direct button to view or submit an entry. The countdown and rising entry count are deliberately front and centre, creating a sense of urgency that encourages hesitant cooks to submit before the window closes for good.

FEATURE 17 / 25 • RECIPE FORMULATION SUBMISSION FORM

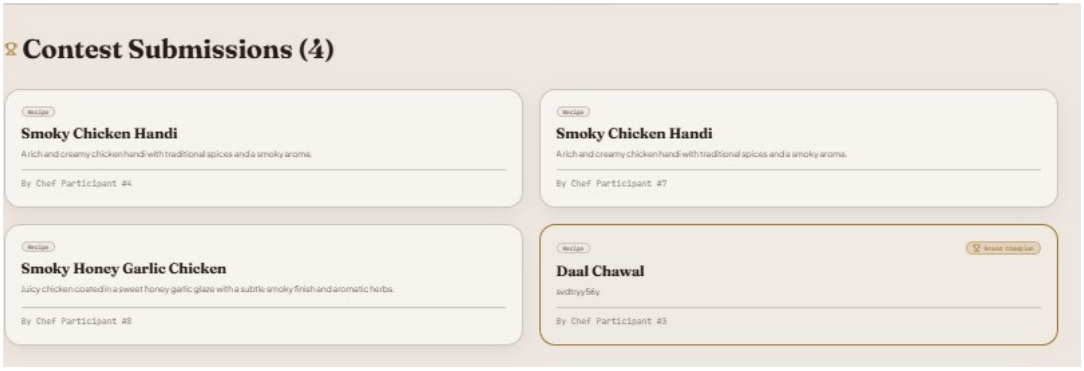

Submit Contest Entry

Participants submit their contest entry through a structured form: a recipe title, a description explaining how the dish meets the challenge, a full ingredients list, and step-by-step procedure notes for the jury to review. Structuring the form this way keeps every entry consistent and easy for James and the jury to judge fairly, since each submission arrives with the same fields filled in the same order.

FEATURE 18 / 25 • ENTRY GALLERY & WINNER HIGHLIGHT

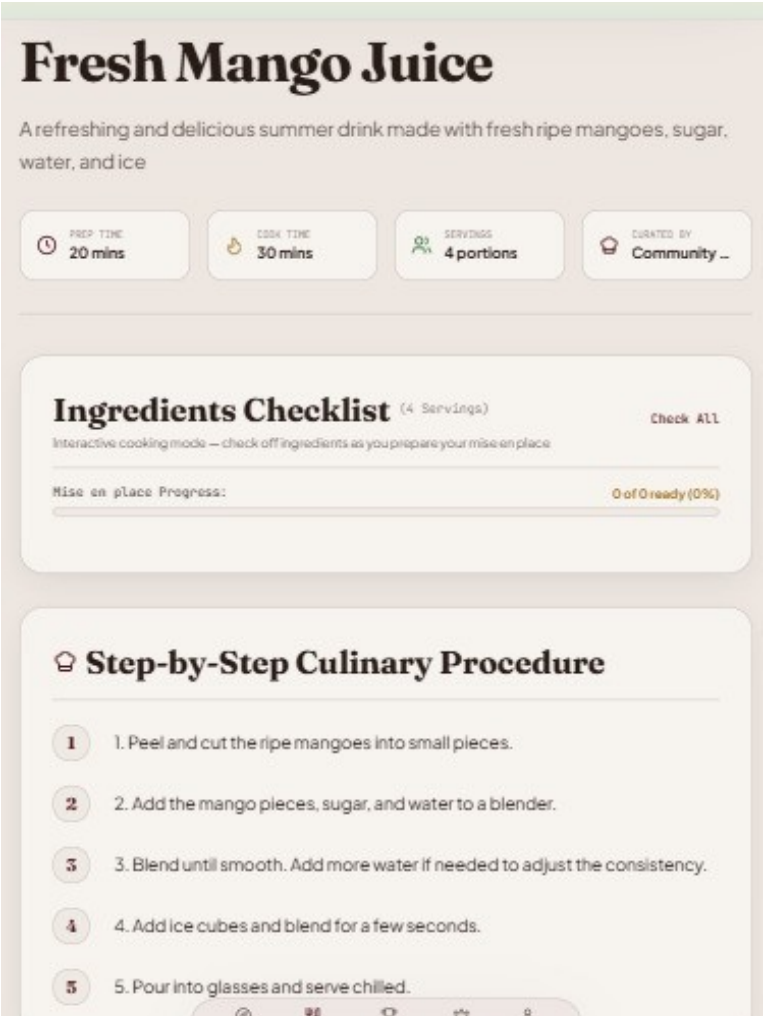

Contest Submissions

All submitted entries appear together in a gallery of cards, each showing the recipe title, a short description and the participant. The jury-selected winning entry is visually highlighted so everyone can see it at a glance. Turning the results page into a showcase in its own right, this gallery view is usually what entrants end up sharing outside the platform once a winner has finally been announced.

FEATURE 19 / 25 • FRESH MANGO JUICE

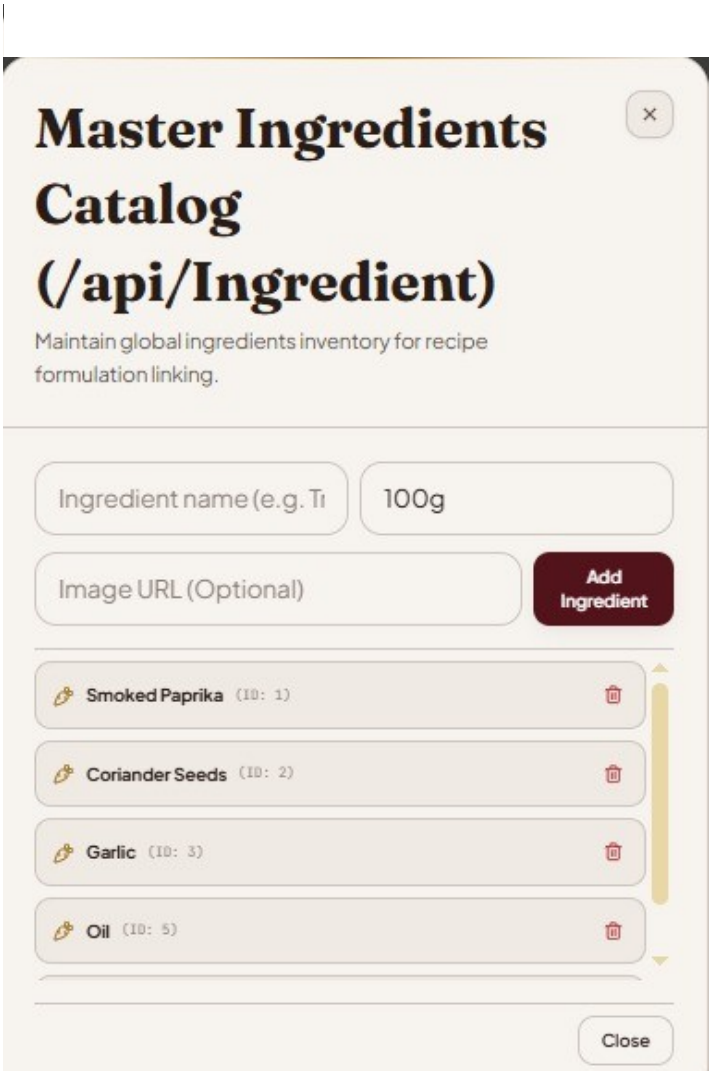

Interactive Recipe Mode

This recipe page adds an interactive ingredients checklist that tracks “mise en place” progress as each item is ticked off, followed by clearly numbered preparation steps, turning a static recipe into a guided cooking mode. It is built for someone actually cooking along in the kitchen rather than just reading the recipe on a screen, so both hands stay free while progress is still being tracked step by step.

FEATURE 20 / 25 • MASTER INGREDIENTS DATABASE

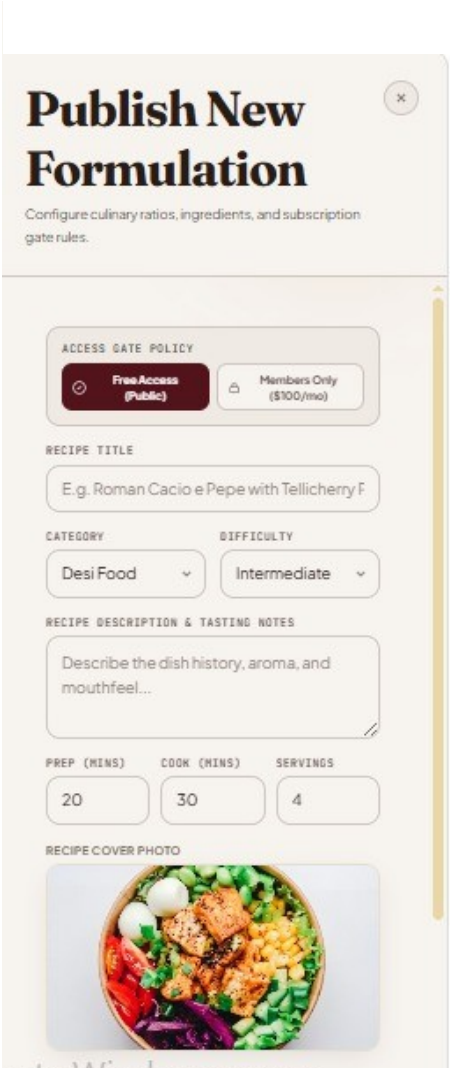

Ingredient Catalog

The admin ingredient catalog lets the culinary team maintain a master list of ingredients used across every recipe, adding a new item with its name, a default measurement such as 100g, and an optional reference image. Each entry keeps its own ID and can be removed in a click, keeping recipe formulations consistent as the catalog grows. Keeping this list centralised also means every new recipe formulation can simply reference an existing ingredient instead of retyping it, which keeps naming and units consistent as the catalog scales into the hundreds of entries.

FEATURE 21 / 25 • ADMIN RECIPE PUBLISHING

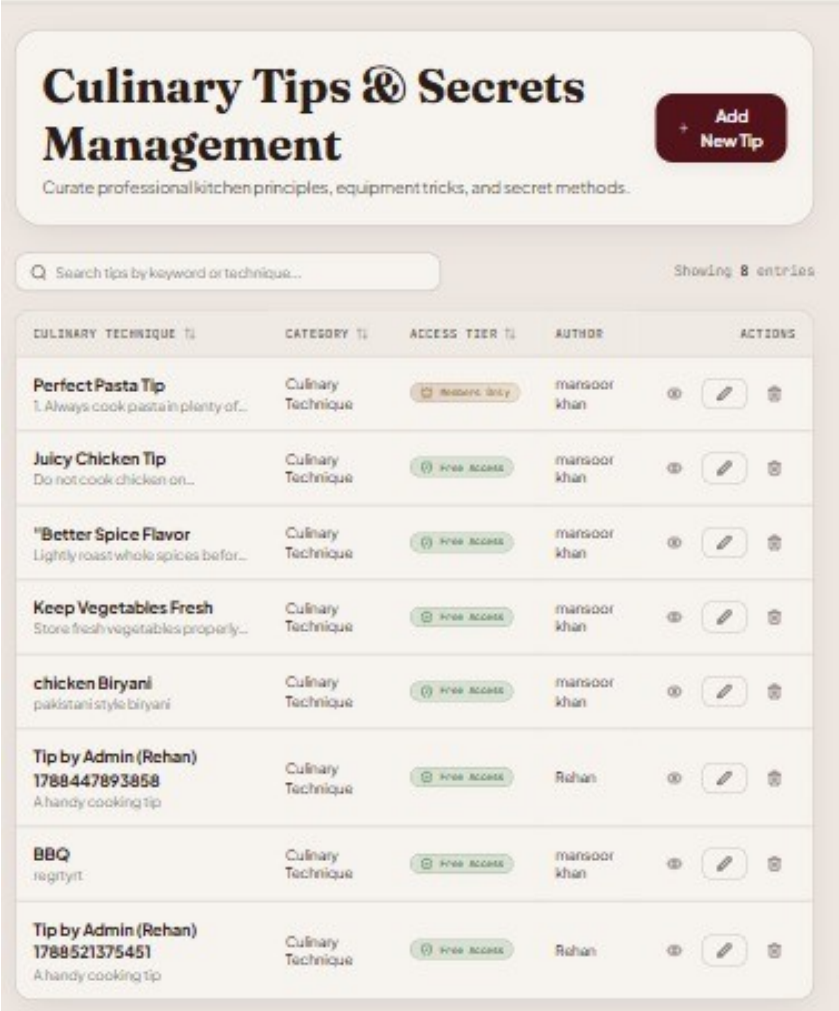

Publish Recipe Formulation

Chefs publish a new recipe through a structured formulation form covering the access gate (Free Access or Members Only), category and difficulty, prep and cook time, servings, a cover photo, and the full ingredient list. Locking a recipe behind the Members Only gate is exactly what turns it into a paid masterclass feature. The same form doubles as the single source of truth for every recipe that later appears in the public catalogue, so whatever is entered here is exactly what visitors will eventually see and rate on the front end.

FEATURE 22 / 25 • ADMIN CONTENT MANAGEMENT

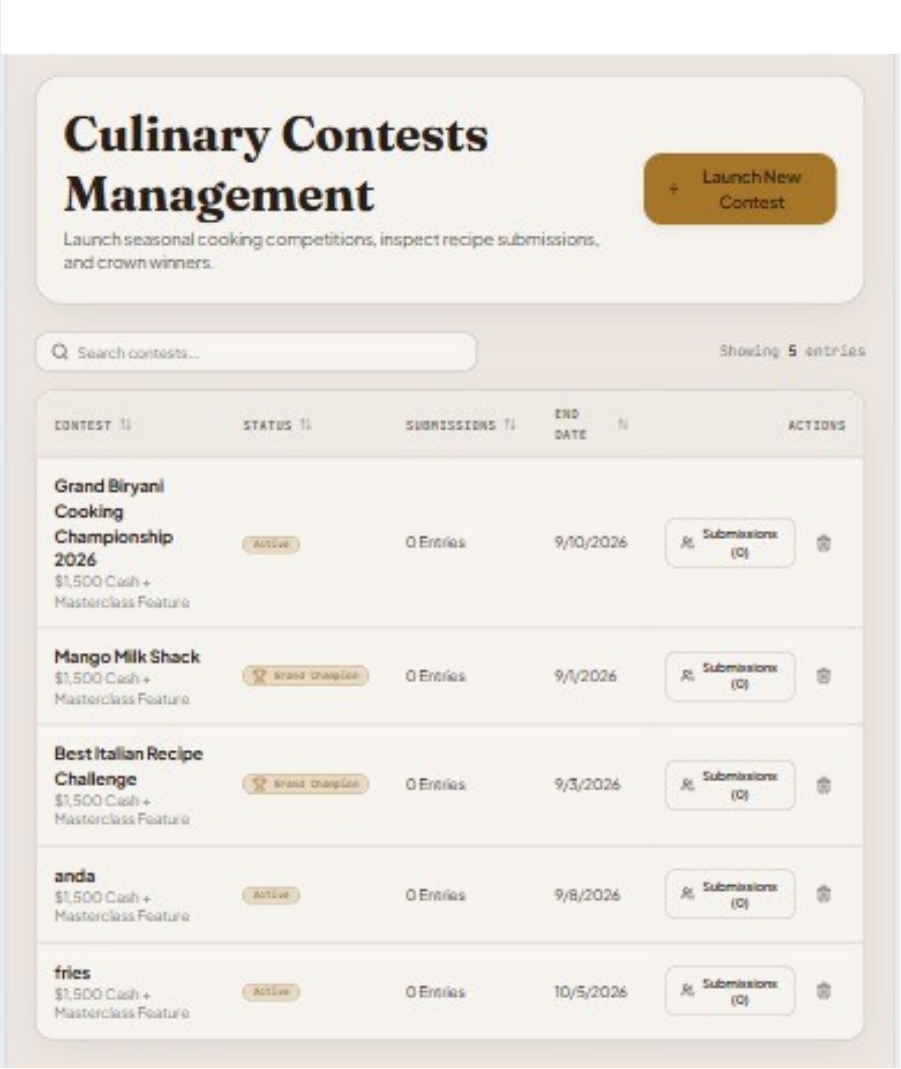

Culinary Tips & Secrets

This admin table lists every professional tip and secret technique published so far, showing its access tier, category, author and quick actions to view, edit or delete each entry. A dedicated button opens the Publish New Secret Method form, where the team can gate a tip as Free Access or Members Only before sharing it. Having every tip centralised in one searchable table also makes it easy for the team to spot gaps in the library and commission new content exactly where members are asking for it.

FEATURE 23 / 25 • ADMIN CONTEST MANAGEMENT

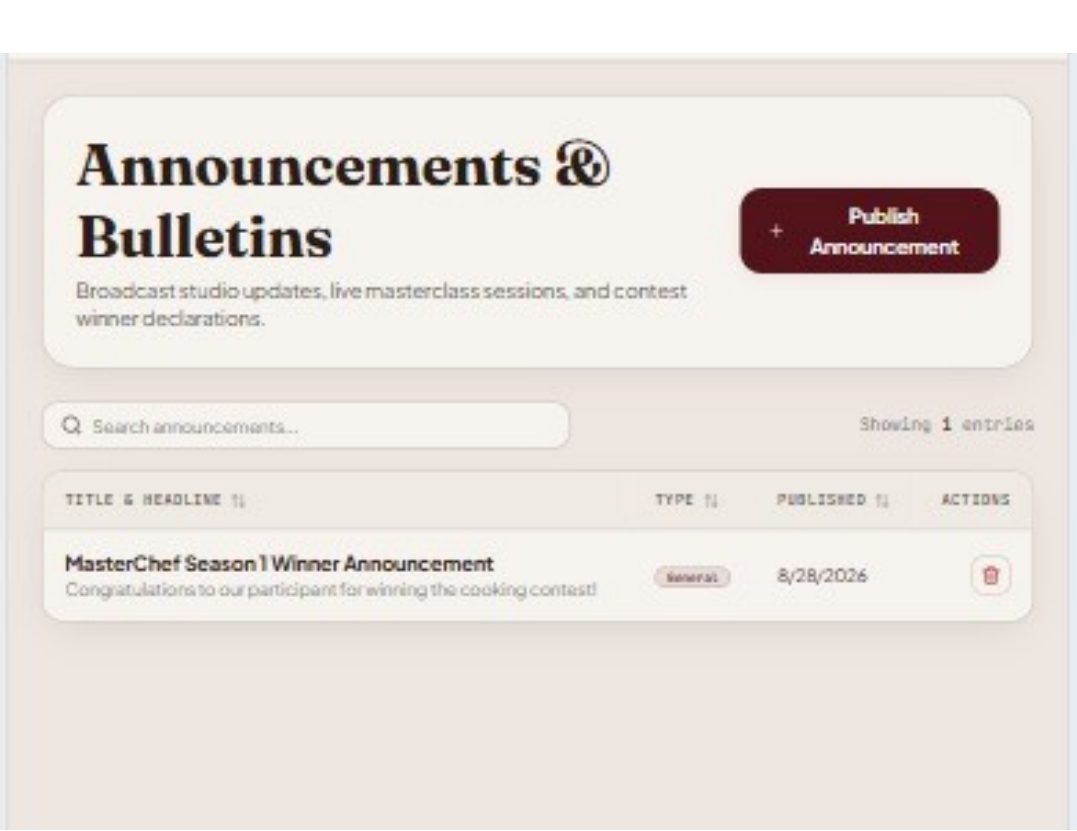

Culinary Contests

The contests dashboard tracks every cooking competition that has been run, including its cash prize, entry count, status and end date, with quick access to review submissions for each one. Launching a new Grand Prix opens a form for the contest title, prize package, start and end dates, the challenge brief, contest rules and a banner image. Reviewing submissions directly from this same dashboard means the team never has to leave the admin panel just to judge a single entry or check how close a contest is to closing.

FEATURE 24 / 25 • ADMIN COMMUNICATIONS

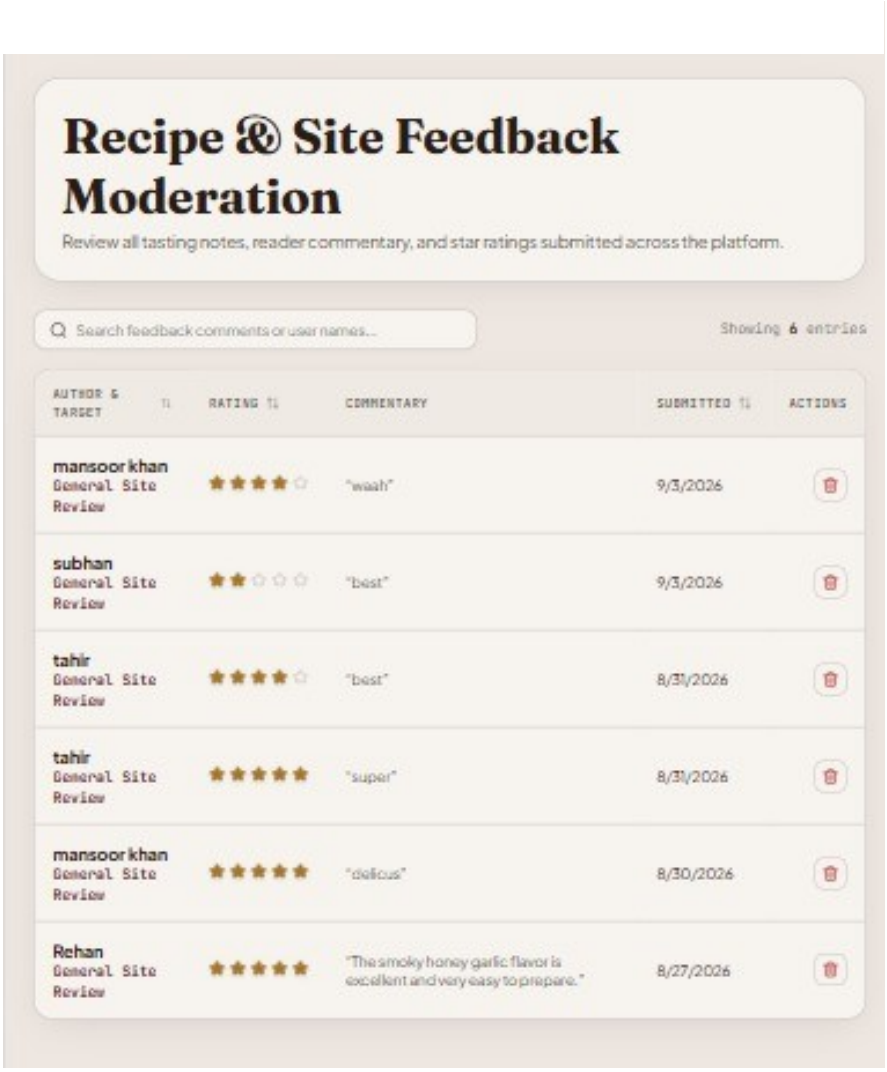

Announcements & Bulletins

Studio updates, live masterclass notices and contest winner declarations are all managed from a single announcements table showing each bulletin's type and publish date. The Publish Announcement form lets the team choose a dispatch type, such as a general broadcast, and write the full announcement before sending it to the community. Keeping every announcement in this one place also makes it simple to look back later and check exactly what was promised to members at any point in the platform's history.

FEATURE 25 / 25 • ADMIN QUALITY CONTROL

Feedback Moderation

Every rating and tasting note submitted across the platform lands in a single moderation table, showing the author, star rating, comment and submission date, with the option to remove any entry. This gives the team a quick way to keep community feedback genuine and on-topic before it appears publicly. Acting quickly from this one table protects the credibility of every star rating shown elsewhere on the public site, which matters most in the moments right after a recipe or masterclass first launches.
